

Safety couplers **prevoS1**

prevoS1 couplers combine top-drawer technology with cost-effectiveness.

prevoS1 technology is protected by patents and complies with current construction standards.

All these technological innovations make this product a unique connection on the market.

Simple and intuitive use in only 1 action!

- **1 PRESS =**
decompression
+ disconnect
⊕ No risk of “hose whip”, no danger to the operator, tools or surrounding products.

- **Optimized flow rate**
Maximizes tool productivity: large tools, jacks, paint guns... No valve spring... this means no turbulence or significant pressure drops when air passes through the coupler.
- **Anti-static**
Prevents the build-up of static electricity.
⊕ Limits the deposit of outside dust on painting, polishing, varnishing work...

■ Anti-scratch

Protects fragile surfaces such as car bodywork, assembly lines, wood industries etc.

■ Light and compact.

Precise gesture, enhanced comfort during repetitive operations.

⊕ Better performance on assembly stations and more precise movements.

■ Button colour code

Easy identification of the coupling profile.

⊕ Less risk of connection errors that can lead to accidents.

■ Marking

Identification on the coupler using laser marking.

prevoS1 couplers are silicone free.

⊕ To avoid the risk of contaminating the compressed air during the application of paint or varnish (surface imperfections).

Reduces the explosive risk in paint booths, grain transfers, etc.

Compatibility with gas zones classified 1 and 2 and dust zones classified 21 and 22.
